What is included in the program?

The program consists of an initial interview with the child and parent, followed by small-group child sessions with a maximum of 6 children per group.

Learning Links runs the program weekly during school terms, with 12 sessions in total. Each session is 1.5 hours, with parents attending for the first and last 15 minutes of each session.

In the sessions, children learn a clear set of rules and LEGO® building skills. They agree upon a project that is achievable for everyone in the group, and are assigned roles:

- **The Architect** holds the building instructions, and is responsible for letting the others know which bricks are required (supplier) and how to put them together (builder).
- **The Supplier** holds the LEGO® bricks necessary to assemble the LEGO® model, and is responsible for supplying the builder with the correct pieces and at the correct time.
- **The Builder** is responsible for taking the individual pieces from the supplier, and putting the pieces together, according to the instructions given by the architect, to create the model.

Roles are rotated throughout the sessions so children can learn different skills and responsibilities.

How will my child benefit?

The LEGO® Based Therapy program uses the principles of Play Therapy to help children communicate and socialise with one another.

By partaking in group tasks and rotating roles, children learn important skills like:

- Sharing
- Waiting
- Turn-taking
- Talking with others
- Making friends

*For children to achieve the best possible outcomes in LEGO® Based Therapy, they need to have a certain level of communication and be able to follow instructions. Please discuss your child’s suitability with our Customer Care team.
